accessing a nonvolatile memory, the nonvolatile memory being installed in an electronic device and comprising a plurality of zones, each zone comprising a plurality of spare blocks, the method comprising the following steps: determining if a look up table is stored in each zone of the nonvolatile memory (see column 10, lines 45-46), and if the zones of the non-volatile memory do not contain a corresponding look up table, storing a look up table of each zone in at least a spare block of the zone (see column 11, lines 9-12); the electronic device calculating one of the zones of the nonvolatile memory corresponding to a logic address used by a host for accessing the nonvolatile memory (see column 12, lines 4-12); the electronic device reading the look up table of the zone calculated in step (b) from at least one of the spare blocks and storing the look up table in a memory of the electronic device (see column 12, lines 36-43); and the host accessing the nonvolatile memory according to the look up table stored in the memory of the electronic device (see column 12, lines 59-63). Referring to claim 3: determining if the zone calculated in step (b) equals the zone corresponding to the look up table stored in the memory of the electronic device (see column 12, lines 10-12). Referring to claim 6: the nonvolatile memory is a flash memory (see column 7, line 56). Referring to claim 7: a device for implementing the method of claim 1 (see column 7, lines 57-60).
